ELECTRIFICATION AND AUTOMATION

Electrical engineering and delivery of factory wired and tested units

ENGINEERING AND PROJECT WORK

Life cycle energy efficiency considered starting from the design phase

LIFE CYCLE SOLUTIONS

Reliable modernizations and spare parts available in the USA and Europe

Top solutions from demanding testing conditions

➤ Koja R&D Center in Finland is a product development and testing center with comprehensive testing methods. Koja's air handling equipment and systems are now tested in actual operating conditions up to +32°C/90% RH.

New innovations for Marine HVAC can be tested immediately in one-of-a-kind facilities already during the product development stage. Thanks to the information obtained through testing, the operation of equipment and systems is optimal for our customers throughout the vessel's life cycle.

Reliable player in Florida

➤ Koja USA Inc. is specialized in improving energy efficiency and indoor conditions on board. Its main operations are located in Florida enabling the best customer service standards in the US.

Customers can achieve the most comfort and healthiest indoor conditions for the passengers on board. Our energy saving concepts ensure the best solutions for the market – with a smaller carbon footprint. We deliver our promises with less waiting time and more high quality services.
