

# KOJA STAMP OF APPROVAL

Inspections and Approval of Process Fans

A cleaner tomorrow today.

# DO YOU WANT TO BE A FORERUNNER IN EQUIPMENT SECURITY?

Periodic inspections are not mandatory for industrial process fans, which can lead to irregular or nonexistent fan condition monitoring. Neglecting the maintenance of these machines can pose a severe safety risk to workers.

When a fan breaks down, it causes interruptions to the process, which in turn results in significant costs.

Furthermore, national and regional occupational safety regulations and the ISO 45001 standard require companies to create proactive maintenance and inspection programs.

Koja offers a fan inspection and approval service for process fans to ensure your process is safe and effective. Our team of experts conducts a thorough and accurate assessment of the fan's condition, creating a proactive maintenance and service plan and a regular inspection program. The machines are labeled with inspection information, including the date of the next periodic inspection, to keep you informed and up to date.

## Verified Operational Reliability & Better Occupational Safety

- ✓ NDT inspections of critical parts
- ✓ Bearing condition and lubrication checks
- ✓ Visual inspections for all fan components
- ✓ Laser alignment and necessary adjustment
- ✓ Balancing checks for operational equipment
